

Complex layout citation fixture

Left column

Deterministic identity prevents citation drift after reprocessing [1]. The paragraph wraps across several visual lines so reading-order recovery cannot rely on one physical line per paragraph.

Evidence note. This boxed callout separates visual grouping from semantic reading order.

Right column

Table-aware extraction preserves bibliography entries that ordinary paragraph recovery can miss [2]. A third source covers stable links across mixed page layouts [3]. The numeric interval [0,1] remains non-citation content.
